

10k Resistors limit LED current to 2mA
Assume 3.7V Lithium Ion 2000mAh
IREF = 2.4kOhm limits charge current to 500mA to Battery
IMIN = 243kOhm sets Minimal Charging Current Threshold to 41mA to qualify for end-of-charge
LED1 LOW/ON when Battery is Charging, Pulls Up to HIGH/OFF when Fully Charged
LED2 HIGH/OFF when Input Voltage is within reference range, pulls to LOW/ON
when VIN < UVLO, VIN > OVP, VIN - VVBAT < VBAT_LO

Title Battery Charger (25V Output to 3.7V Li-ion)
